

Historical Developments in Computer Science

From 1801-1970

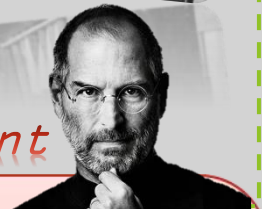

In 1890 Herman Hollerith built the first punched-card tabulating and sorting machines and founded the company that would later be known as IBM. As shown by the image to the right.

IBM

From 1999-Present

In June 2007 Apple released the first iPhone. Steve Jobs CEO of Apple at the time called it the "revolutionary mobile phone". It changed the way people look at smartphones and their limits. It combined a camera, mp3 player, touchscreen, a phone, and a computer.

Google

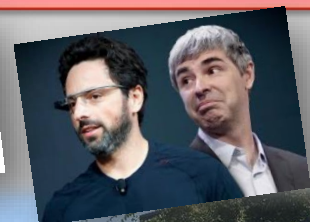

Google

From 1970-1999

Google was created in 1996 by two people at Stanford university, Larry Page and Sergey Brin. On September 15th, 1997, they registered the domain google.com. This later changed the way us people seek and consume information.
